

ECL Provocation

Challenges “Relating” to Digital Technology @ Scale

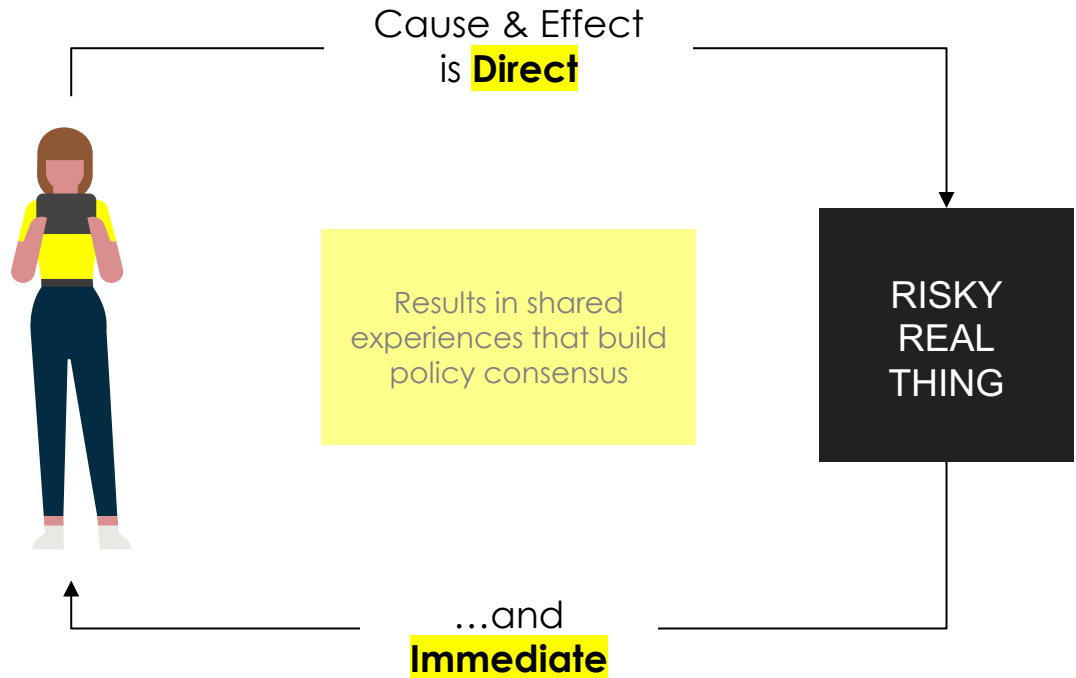

Martin Ryan, M.Des

Venture Strategy & Foresight, ServiceNow

martin.ryan@servicenow.com

**| We struggle to relate to the risks
of digital technology at scale...**

We negotiate risk well when...

Capital

227

Capital Airlines

Capital
Montana

227

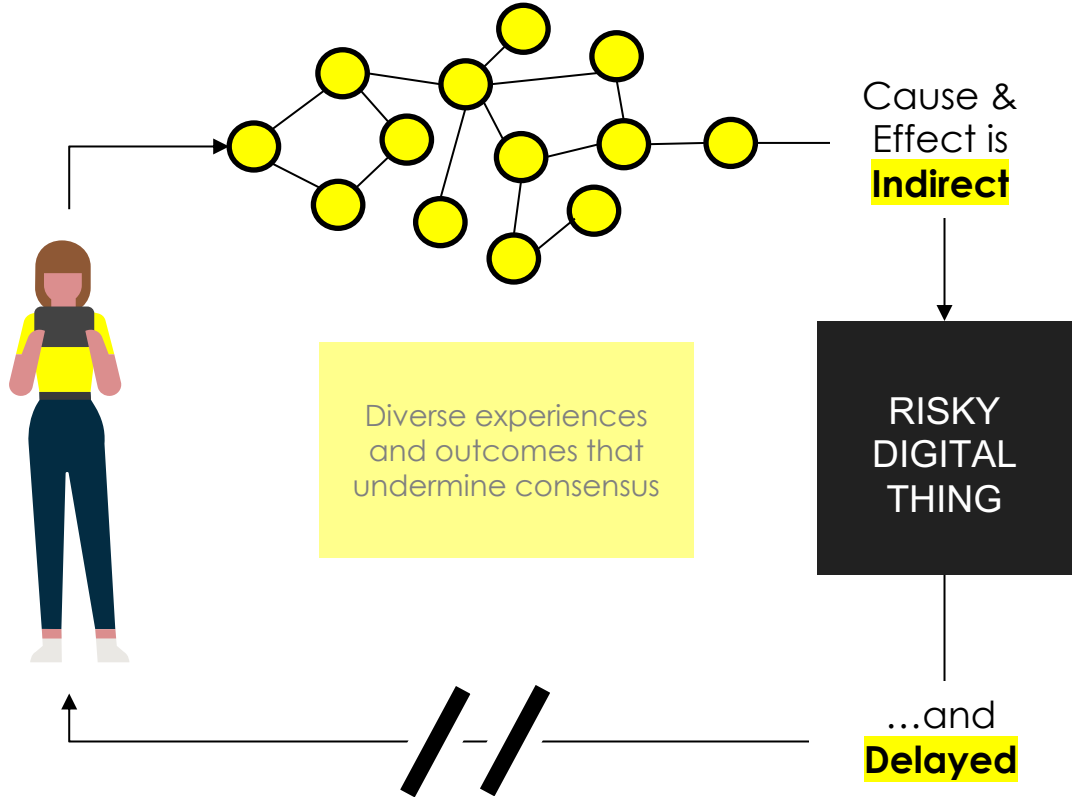

Capital
227

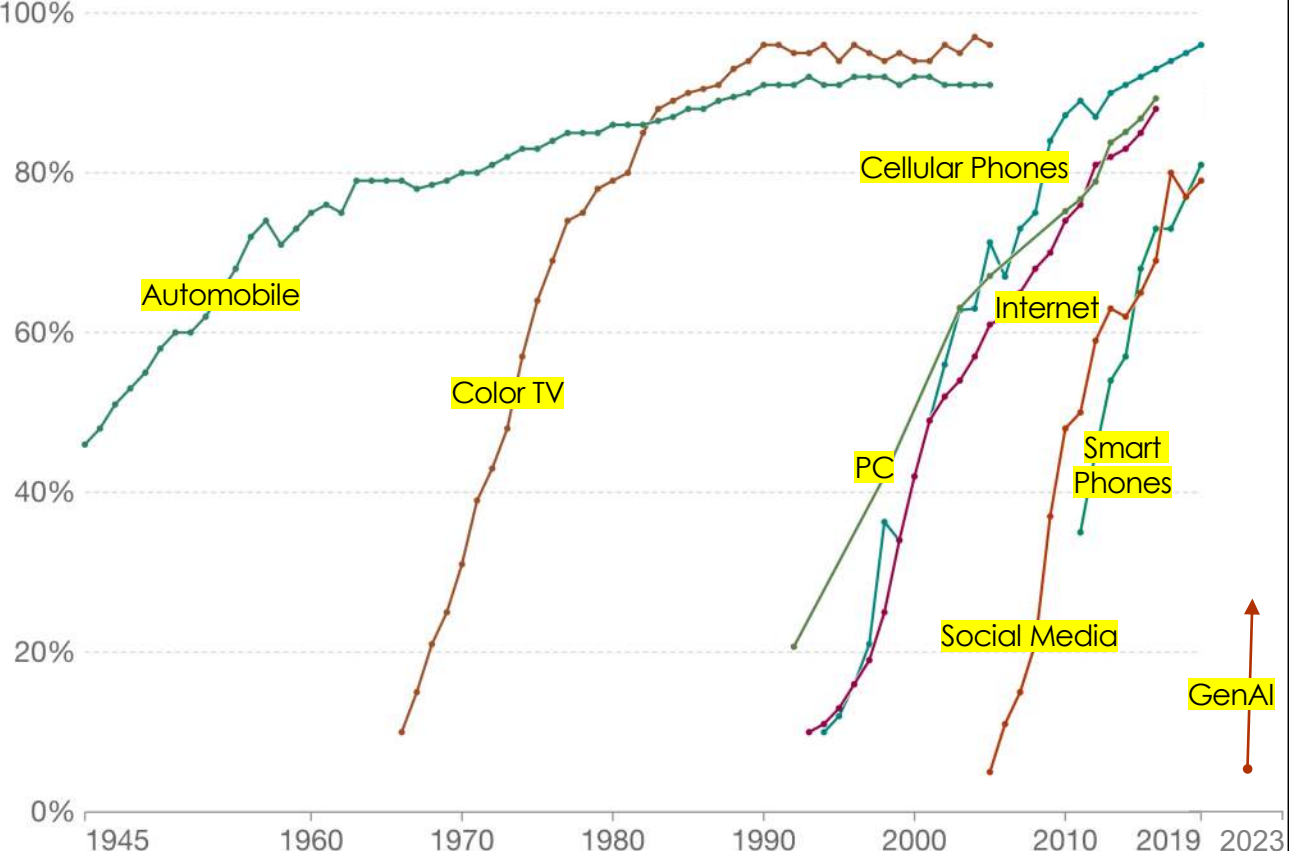

PCA

The Capital Airline

The nature of “Digital Risk” is just different.

Share of United States households using specific technologies

A blind spot so big, social media drove the whole world through it.

**| We are productizing the only thing
left, ourselves.**

This is the way it **always** goes.

| What happens the moment we realize *we have lost control.*

Our **shared perception** of human control will eventually collapse...

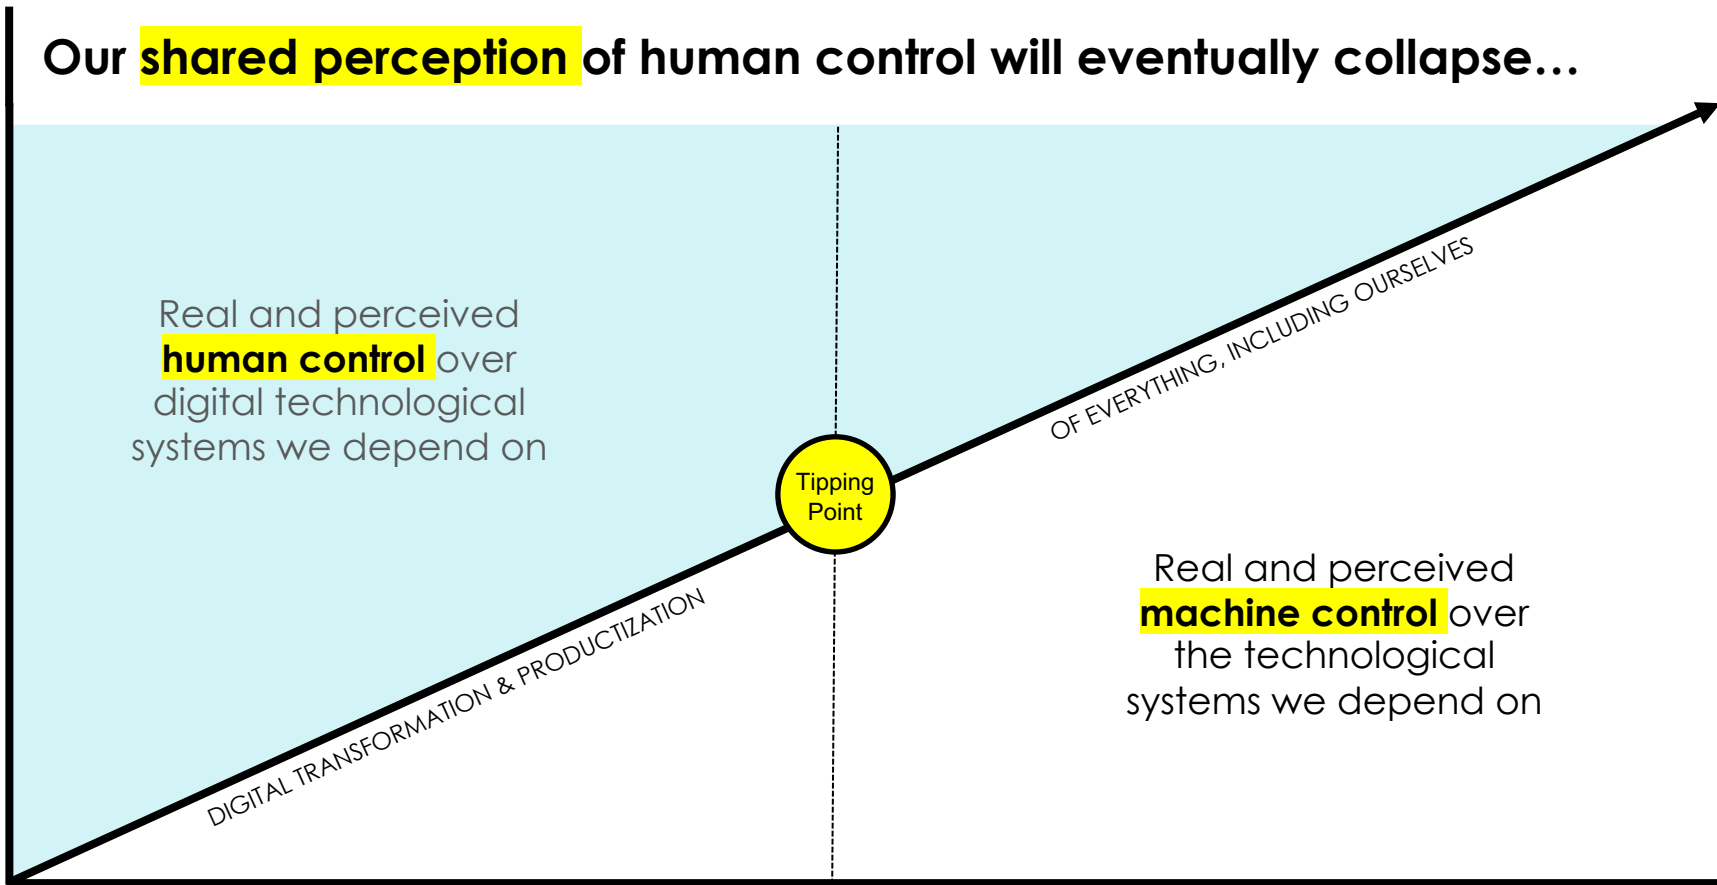

Real and perceived **human control** over digital technological systems we depend on

DIGITAL TRANSFORMATION & PRODUCTIZATION

Tipping Point

OF EVERYTHING, INCLUDING OURSELVES

Real and perceived **machine control** over the technological systems we depend on

Emotional Disorders

Behavioral Disorders

Functional Disorders

Reduction in Human Intervention in Regular Operations

Anxiety/Fear

Workforce Displacement

Stress of Job Complexities

Burden of Skills Upgrade

Loss of Control and Purpose

Unhealthy Competition/Dependence

Job-Loss/Displacement Trauma

Serious Cognitive Issues

Serious Physiological Issues

Machine-Taking Responsibilities of Human-Cognitive Roles

Development and Trial

Implementation

Short-Medium Term

Long-Term

“Our assumption that **streamlining processes** will lead, in a linear fashion, to greater efficiencies, a **shift from lower-level tasks to higher-level tasks**, and thus the magic of both cost reductions and employee satisfaction, **may be fundamentally flawed”**

- “The undesirable consequences of automation and AI technologies”, Gartner Maverick Research, 2019

Generative AI

“Our assumption that ~~streamlining processes~~ will lead, in a linear fashion, to greater efficiencies, a **shift from lower-level tasks to higher-level tasks**, and thus the magic of both cost reductions and employee satisfaction, **may be fundamentally flawed**”

- “The undesirable consequences of automation and AI technologies”, Gartner Maverick Research, 2019

So **what can we do** to improve
this toxic relationship?

| A few directions worth exploring....

LEARN FROM OUR MISTAKES

We need to **lower the barriers to ethical inquiry** at work

We need new ways of **modeling the objectives and unintended consequences** of digital systems at scale

SACLE MORE OF WHAT WE WANT

We need to build systems that **bias the values and objectives we need** to survive

Build **new systems for democratic dialogue that scale** and can better negotiate policy at local, national and global scales

BET ON OURSELVES

Work to balance the power of new digital capabilities between labour and capital

Prioritize community and human interaction in the design of our physical world to counterbalance our digital one

THANK YOU!
